

FOR IMMEDIATE RELEASE

## ILS Technologies Introduces *Discover For Yourself™*

*Premiere e-discovery platform provides efficient and defensible discovery for any size case*

**LEWISVILLE, TX – January 31, 2011** – ILS Technologies, a trusted provider of advanced litigation support managed services, announced today the introduction of its latest electronic discovery software called “Discover For Yourself™”. Discover For Yourself represents ILS Technologies’ latest generation e-discovery platform that promotes efficient, cost-effective data reviews while ensuring accuracy and defensibility. The new product offers a viable option for the historically underserved market of legal professionals handling small cases, for which premiere technology has often been financially out of reach.

Since 2004 ILS has set new standards in delivering litigation solutions to support cases involving Fortune 50 companies and governmental agencies. In that tradition, Discover For Yourself provides an intuitive, easy-to-use interface and all the robust features that are the hallmark of ILS Technologies’ discovery tools, but in a platform that is scalable for any size case.

Because not every matter involves multiple terabytes of data, ILS offers right-sized pricing options to clients that need the functionality of a premium e-discovery product but without the premium price tag. For as little as \$1,000, ILS clients can leverage all the features of Discover For Yourself in a fully managed project that includes processing for up to eight gigabytes of data and hosting for up to 24 months. Clients have the option to scale up as a project size increases. Pricing will scale respectively.

Discover For Yourself features include:

- **File Processing** – Processes more than 3,700 file types including multiple e-mail formats, Concordance load files, and scanned hard copies with precision and accuracy.
- **Review Interface** –Intuitive, user-friendly interface includes features from document coding and redaction to highlighted search hits.
- **Analysis** – Automatically removes exact duplicates from a dataset, identifies similar documents, locates documents related to a particular subject, and determines file types.
- **Utilities** –Includes robust search capabilities, filters, document grouping, and folder trees designed to help locate and manage data more effectively.

- **Case Management** – Administrators may control user access levels, organize cases for iterative workflows, and generate useful reports for case analysis and defensible record management.
- **Production Output** – Produces documents in a variety of formats including native file and TIFF formats with permanent redactions and bates numbering.

ILS Technologies is featuring its new Discover For Yourself software at LegalTech New York, January 31 – February 2. Visit ILS at booth #1614 to learn more or see a product demonstration.
